

Flux to develop family of planar transformers to the European Space Agency (ESA)

Asnaes, Denmark January 2009

Flux has been selected by the European Space Agency (ESA) to develop a family of planar transformers, which will meet the space industries demanding quality standards and survive extreme environmental conditions.

The project is expected to run for 2 years and will involve leading European companies and knowledge centres within the space industry.

Flux has been selected for its long experience of designing and manufacturing magnetic components combined with an extensive knowledge of the space industry.
